administrador@lab-dacc-08: /media/arquivos/aosp
administrador@lab-dacc-08: /m... administrador@lab-dacc-08: /me... administrador@lab-dacc-08: /me...
<tag>[:priority]
where <tag> is a log component tag (or * for all) and priority is:
V  Verbose (default for <tag>)
D  Debug (default for '*')
I  Info
W  Warn
E  Error
F  Fatal
S  Silent (suppress all output)

'*' by itself means '*:D' and <tag> by itself means <tag>:V.
If no '*' filterspec or -s on command line, all filter defaults to '*:V'.
eg: ':S <tag>' prints only <tag>, '<tag>:S' suppresses all <tag> log messages.

If not specified on the command line, filterspec is set from ANDROID_LOG_TAGS.

If not specified with -v on command line, format is set from ANDROID_PRINTF_LOG
or defaults to "threadtime"

-v <format>, --format=<format> options:
Sets log print format verb and adverbs, where <format> is:
brief long process raw tag thread threadtime time
and individually flagged modifying adverbs can be added:
color descriptive epoch monotonic printable uid usec UTC year zone

Single format verbs:
brief      - Display priority/tag and PID of the process issuing the message.
long       - Display all metadata fields, separate messages with blank lines.
process    - Display PID only.
raw        - Display the raw log message, with no other metadata fields.
tag         - Display the priority/tag only.
thread     - Display priority, PID and TID of process issuing the message.
threadtime - Display the date, invocation time, priority, tag, and the PID
             and TID of the thread issuing the message. (the default format).
time       - Display the date, invocation time, priority/tag, and PID of the
             process issuing the message.

Adverb modifiers can be used in combination:
color      - Display in highlighted color to match priority. i.e. VERBOSE
             DEBUG INFO WARNING ERROR FATAL
descriptive - events logs only, descriptions from event-log-tags database.
epoch      - Display time as seconds since Jan 1 1970.
monotonic   - Display time as cpu seconds since last boot.
printable   - Ensure that any binary logging content is escaped.
uid        - If permitted, display the UID or Android ID of logged process.
usec       - Display time down the microsecond precision.
UTC        - Display time as UTC.
year       - Add the year to the displayed time.
zone       - Add the local timezone to the displayed time.
"<zone>"   - Print using this public named timezone (experimental).
